CSE 4630: Containerization for Developers

Department of Computer Science and Information Technology

7th Semester

Assignment 1

Docker Fundamentals: Containers, Ports, Volumes and Networks

Book Reference	Chapters 1–3

Practical Questions

Q. No.	Question
1	Verify the Docker installation and display the installed Docker version.
2	Run an nginx container in detached mode and map host port 8080 to container port 80.
3	Create a Docker volume named studentdata and mount it at /data inside an Ubuntu container.
4	Create a Docker network named college-net and run two containers connected to this network.
5	Create a file inside a volume-mounted directory, remove the container, create another container using the same volume, and verify that the file is retained.
